## Structured cabling range

**B3FT offers a full and comprehensive range of structured cabling products. As the reliability and speed of a data network is dependent on its component parts, B3FT offers a flexible high quality suite of products to suit every network design installation.**

Designed and manufactured to the appropriately high standards, the B3FT portfolio comprises various types of cables, connectors, keystone jacks, outlets and patch panels. This approach allows the network to be installed and configured in the most appropriate way for the customer.

B3FT's range covers both traditional structured cabling products along with fibre optic products for deployment, allowing the customer to easily connect and re-deploy any data device, delivering high performance and ease of administration throughout the network's life.

# What is structured cabling?

**B3FT structured cabling isn't a product name; it's a concept that organises the complex components that we use every day in our growing technology.**

Since it's made of different products, structured cabling will let you mix and match new systems or add and subtract them, without any unnecessary disruptions. Moreover, because it defines a way to organise cables, the system administrators find that structured cabling makes the move smooth and silent, without interfering with the performance of the network.

B3FT structured cabling is perfectly ready to bring together different components with ease. This, in fact, is one of the most recognised benefits of this system. These systems allow administrators to transfer voice, data, audio and video within the network. This allows them to deliver remarkable performance throughout their service lives and can easily be managed.

B3FT Structured Cabling is the answer to your network requirements!

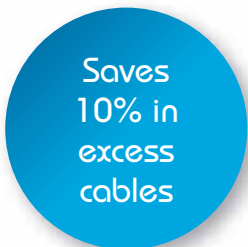

Saves  
30% in  
installation  
time

## Tool-less keystone jacks

B3FT's CAT5e UTP 180° tool-less jack is designed for installer convenience. It saves a lot of time on termination. Compared to regular punch down termination, it releases the punch down force by its smart design. The product conforms to ergonomics, easy installation and safe setting. It is the best choice when you perform your UTP CAT5e solution.

## LAN Cable

and makes  
installation easy

B3FT have a wide range of LAN cables in different categories and structures designed for high bandwidth applications.

Different packaging solutions such as reel in a box are available.

**TO ORDER** products from the structured cabling range contact your area distributor. Details on the back cover

Easy to install  
and maintain

## Patchpanels

The patchpanel is designed for high-bandwidth applications. Patchpanels are approved in accordance with the most stringent test procedures. Complete with cable support, stripes and 24 pcs keystone jacks with 180° connection.

B3FT also has a wide range of 19" racking options to support these patchpanels.

Wide range  
of choice to suit  
all needs

## Wall outlets

Outlets designed for the range of keystone jacks available in various configurations to suit different applications.

Multiple port options gives wide choice

# Surface mounted boxes

A range of surface mount boxes designed for the B3FT range of keystone jacks and fibre connectors. Available with or without shutter doors, and with 1, 2, 4 or 6 port configurations.

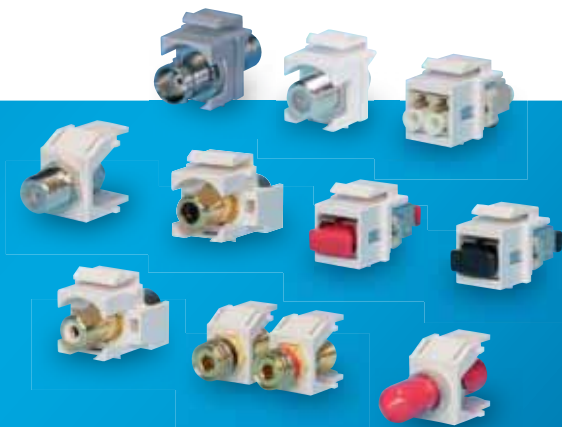

Easy  
installation  
with multiple  
options

## Multimedia modules

B3FT has a wide range of multimedia outlets designed to fit the surface mount boxes. These allow the various connector types to be inserted individually in any option allowing unique individual configurations to be made for each installation requirement.

The connector types available include various fibre, coaxial and telecoms variants.

**TO ORDER** products from the structured cabling range contact your area distributor. Details on the back cover

High quality  
and flexibility

## Patchcables

B3FT offers a full range of patchcables for different categories and of different lengths & colours. Each are designed for high bandwidth applications and reliability.

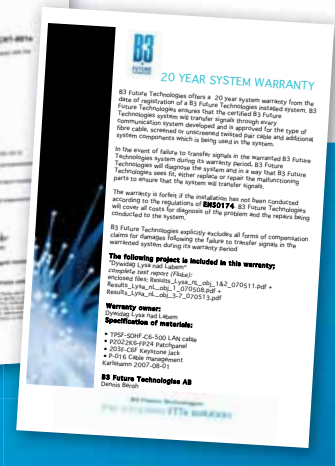

# Warranty & Listing

B3FT's comprehensive range of products is all tested and approved to the appropriate standards and is listed by the relevant authorities.

B3FT offers a full 20 year warranty on all products it sells.

Further details and terms & conditions available on request.
